1. The Examiner has carefully considered comments made in the Interview of 9/9/05 and has reviewed the record to date. At this time, the Examiner makes a new rejection based on new art and argument, the Action accordingly not made final.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Paton et al.

Paton et al. discloses the invention substantially as claimed. Paton et al. discloses in TABLE 1, that know Ti-11 has a coposition of:

Art Unit: 1742

6% Al;

1.5% Zr;

1.0% Mo;

2% Sn;

0.1% Si;

0.35% Bi; and

remainder Ti.

It is well established that "consisting essentially of" limits the scope of a claim to specified materials or steps "and those that do not materially affect the basic and novel characteristic(s)" of the claimed invention. *In re Herz*, 537 F.2d 549, 551-52, 190 USPQ 461, 463 (CCPA 1976). If an applicant contends that additional steps or materials in the prior art are excluded by the recitation of "consisting essentially of," applicant has the burden of showing that the introduction of additional steps or components would materially change the characteristics of applicant's invention. *In re De Lajarte*, 337 F.2d 870, 143 USPQ 256 (CCPA 1964).

In this case, the burden is upon Applicant to show that the exclusion of the additional component of Al in the amounts as disclosed materially effect the characteristic, in this case, castability. Applicant's disclosure and claim 3 allow for the addition of Zr., Mo, Sn and Si.

Applicant has provided a comparison in the Specification of several compositions to the pending invention, but must provide a showing as to Al in this composition with Bi alone,

Art Unit: 1742

and as per claim 3, with the additional alloying elements, materially affects the castability characteristic disclosed as an unexpected result.

5. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura et al.

Kimura et al discloses the invention substantially as claimed at Table 1, No. 30.

Kimura et al. discloses a titanium alloy comprising :

0.5%S ;

0.3%Te ;

1.0%REM ;

0.5% Pb ;

0.5% Bi ; and

remainder Ti.

In this case, the burden is upon Applicant to show that the exclusion of the additional components of S, Te, REM and PB in the amounts as disclosed materially effect the characteristic, in this case, castability.

Applicant has provided a comparison in the Specification of several compositions to the pending invention, but must provide a showing as to the additional elements in this composition with Bi alone materially affects the castability characteristic disclosed as an unexpected result.
